

Remote Monitoring and Alarm Notification System

- **Monitor** 4 or 8 conditions, plus power failure and sound level.
- **Notify** 4 or 8 people with custom voice phone calls.
- **Control** a thermostat or other device automatically, manually, even remotely.
- **No Monthly Fees**

Sensaphone 400

Sensaphone 800

Features

For small businesses and property owners, the Sensaphone 400 offers an easy, inexpensive way to monitor your remote facility, cabin or vacation home. Installed in a clean indoor environment, it has built-in monitoring for power failures, temperature, and sound monitoring of audible alarms. Four external inputs on the back can be connected to various external sensors to monitor temperature, water on the floor, humidity, intrusion and more.

When an alarm is detected, the 400 can notify four people by making voice phone calls. It will continue to make phone calls until someone responds to the call. The 400 also includes nonvolatile memory and a 24-hour battery backup with user-installed batteries.

When you need to monitor additional conditions or need to notify more people, the 800 is the best choice. It has all of the features of the Model 400, but instead of four external inputs, it is equipped with eight. It can also contact eight people instead of four.
